

Abstract of the Disclosure

Eyewear member includes a structure for fitting peripherally on or around or behind lens and structure of conventional eyewear. Interfitting structure ranges from sealing segments to eyewear members which may attachably engage or simply interfit behind conventional eyewear. The eyewear members enables conventional eyewear to form a closer fit with the face of the user to protect the person's eyes from wind, water and foreign material. All embodiments contemplate selectable removability, replace ability and interchangeability.
